

Pergola awning

weinor PergoTex II

weinor PergoTex II LED | Basic | LED Basic

An open air feeling meets wind and weather protection – with the flexible **weinor PergoTex II** pergola awning. When it is open, it offers an open air feeling like a convertible and an unobstructed view to the starlit sky in the evening or at night. When it is closed, it protects against rain and provides sun and UV protection. Thus, you can use your patio in two ways. The elegant, high-quality self-supporting construction has been designed based on the proven weinor technology and it can easily withstand even high wind loads. The PVC awning material has a very high tensile strength, can be extended and retracted by means of a drive and, on request, is also available as a translucent, light-transmitting version – for a magic atmosphere on your patio.

NEW!

**weinor
PergoTex II / LED:**
Integrated lighting

Toothed belt tensioner:
For easier, service-
friendly tensioning of
the timing belt

Fabric protection roof:
Noise reduced

Wall gap sealing profile:
Easily accessible adjustment area

Variable water outlet:
Individual height
adjustment

Sturdy pull system:
Smooth extending
and retracting

weinor PergoTex II Highlights

02

**Controlled
water drainage**

Rain gutter and posts:
Controlled rain drainage

**Straightforward,
functional design:**
Posts with integrat-
ed, easily accessible
water drainage

Convertible folding system in 2 versions:

- weinor PergoTex II
- weinor PergoTex II Basic

Modular system: Convenience and weather protection

weinor PergoTex II Benefits

Convertible folding system – rain-proof, wind-resistant and retractable

- Waterproof: light-proof or light-transmitting PVC fabric with high tensile strength
- Pitch from 0° to 25° possible
- Ideal water drainage already from a pitch of 8° (no risk of pooling)
- Elegant design without screws in directly visible areas
- Robust: suitable for wind loads up to force 11 on the Beaufort scale
- Easy installation: only a few tools required, with pre-assembled adhesive seals
- Easy installation of the continuous wall profile (similar to Terrazza)

Rain gutter and posts – controlled rain drainage and variable water outlet

- Controlled water drainage from the aluminium fabric safety shield over the side channel in the large gutter in the front area, and thus reduced soiling of the fabric
- Two-part posts:
 - Leads for add-on products can be installed in the posts
 - Water drain pipe can be easily accessed for servicing
- Lateral small gutter along the side channel with separate groove for cable routing
- individual adaptation of the height of the water outlet

Sturdy and robust drive system – smooth operation with excellent tension

The proven drive system with heavy-duty and durable lasting components ensures really smooth, continuous extending and retracting.

- Highly resistant toothed belt with ball bearings
- Extremely robust rollers
- Almost all visible covers are made of aluminium cast in the system's colour

Carriage system with end stop damper and bearing plate

NEW!

- Quieter running due to new end stop dampers
- All materials are protected
- Motor housing plates and bearings are made of durable high strength aluminium
- New motor housing lock with split pin for easy installation and service

Toothed belt tensioner

NEW!

The toothed belt tensioner compensates for temperature differences and is very easy to service thanks to its tension indicator.

02

- ① Open wall gap sealing profile adjustment area (with LED option)
- ② Wall gap sealing profile adjustment area (without LED option)

Continuous wall connection profile – easily accessed and easy adjustments

The wall gap sealing profile screwed to the wall is used to attach the side channel, the rain shield and the electronics. The electronic components are installed in the wall gap sealing profile and behind cover strips so that they are concealed, but can still be easily accessed for servicing. This makes it possible to have the maintenance work carried out easily and quickly and facilitates servicing work on control components. In the case of the order option “without LED”, the wall bracket is equipped with the mounting plate, but is delivered without the transformer/receiver bar. The order option “LED” additionally includes the transformer/receiver bar (window strip) to attach the LED components.

High-quality aluminium safety shield with separate guttering

- Very robust aluminium fabric safety shield designed as a chamber profile (noise-reducing during rain)
- The fabric safety shield can be optionally reinforced for higher snow loads
- Rainwater runs off via the front gutter to the right and left into the lateral gutters along the side channels in a controlled manner
- Easy to clean (smooth surface)
- Reduced soiling of the fabric due to the guttering on the aluminium safety shield

HighPower LED spotlights – for an amazingly beautiful atmosphere

On request, dimmable HighPower LED-single spotlights can be integrated into the transoms.

- Invisible cable routing in the fabric seams
- LED spotlights dimmable with BiConnect radio control
- 30,000 LED light hours with lowest energy consumption (85% electricity saving compared to halogen technology)
- Fixed spacing:
 - 500 mm between the LED spotlights on the transoms
 - A maximum of 12 LED spotlights per transom
 - A maximum of 4 staves with LED

weinor PergoTex II Benefits

Modular system – even more convenience and better weather protection

Very easy to add and retrofit elements to the weinor PergoTex II system:

- All-glass glazing elements
- Vertical awnings
- The dimensions and shape of the guttering and the posts have been designed in such a way that glazing elements (GE) can be mounted without additional profiles
- The whole unit is completed by smart wiring concepts tailored to the products

Preparation for mains connection (3 order options)

For all options, the cabling for the power supply is integrated into the components so that it is weather-proof, concealed and visually appealing.

- Preparations for mains connection
 - For the installation of the VertiTex II vertical sun protection on the guttering (front right/left)
 - For the installation of the lateral VertiTex II
 - In the guttering for optional electrical connections

The weinor Pergona® collection

The robust and waterproof PVC fabrics are available in 2 versions – either as Pergona® classic or, subject to a surcharge, as Pergona® translucent.

The special feature of the Pergona® translucent is its high light transmission of up to 21%. The fabric allows natural light through and provides optimal protection against rain and UV rays.

With its light transmission of up to 11%, the Pergona® classic is ideally suitable for shading purposes. Dirty marks cannot be seen from underneath either.

Three additional fabrics from 2025.

weinor PergoTex II LED

Integrated HighPower LED spotlights

Select LED components for top weinor quality:

- Integrated into the transoms
- Atmospheric light thanks to special glass lenses
- Highly energy-efficient
- Operating life of 30,000 hours of lighting with 85% lower energy consumption
- Infinitely dimmable when used with BiConnect radio control
- Easy to service: simple replacement of individual LED lights
- A defined number of LED spotlights per transom
- Spacing of the spotlights 500 mm
- A maximum of 12 LED spotlights per transom
- A maximum of 4 staves with LED spotlights

Of them, number of 45 x 60 mm transoms with LED										
	0	1	1	1	2	2	3	3	4	4

Options

- Changing the position of LED transoms (no extra charge).
- Supplementing/ordering additional transoms (45 x 60 mm) with/without integrated LED spotlights (extra charge).

Prerequisites

- A transom (45 x 60 mm) without LED spotlights must be installed between the transoms with integrated LED spotlights.
- A maximum of 4 transoms with LED spotlights per system possible.
- 0 or 1 or 2 transoms (45 x 60 mm) without integrated LED spotlights must be installed between the first transom with integrated LED spotlights and the transom (80 x 60 mm) on the wall.
- Lighting in the transom (80 x 60 mm) on the wall and in the transom (80 x 60 mm) on the projection profile is not possible.
- Any number of transoms without LED possible between the last transom with LED and the transom (80 x 60 mm) on the guttering.

Joined systems – distance between LED spots in transition area

The distance between the LED spotlights in a multi-section unit's transition area can be 500 mm to 1500 mm.

Possible choice and combination of transoms 45 x 60 mm transoms with LED

(using the example of a weinor PergoTex II with a projection of 241 – 305 cm)

- One 45 x 60 mm transom with LED centrally positioned **1** (weinor PergoTex II LED standard configuration option)

Further options

- Existing 45 x 60 mm transom with LED **1** (position changed)
- Existing 45 x 60 mm transom supplemented with LED **2**
- Existing 45 x 60 mm transom with LED **1** (position changed)
- Existing 45 x 60 mm transom supplemented with LED **2**
- Additional 45 x 60 mm transom (without LED) **3**
- Existing 45 x 60 mm transom with LED **1** (position changed)
- Existing 45 x 60 mm transom supplemented with LED **2**
- Additional 45 x 60 mm transom (without LED) **3**
- Additional 45 x 60 mm transom **4** (with LED)

weinor PergoTex II with separate LED light bar

Lowered LED light bar

Benefit: lighting even if the system is retracted

LED light bar on the guttering

Note: The LED light bar on the guttering is ideally installed in combination with the weinor w50-c fixed element

On request, the weinor PergoTex II can also be supplemented with a separate light bar. This light bar is mounted to the wall or to the guttering. The spacing of the spotlights of the separate light bar is 550 mm and thus deviates from the spacing of the integrated LED spotlights.

Width in mm	Number of LED spotlights	Width in mm	Number of LED spotlights
1,500 – 1,649	2	3,850 – 4,399	7
1,650 – 2,199	3	4,400 – 4,949	8
2,200 – 2,749	4	4,950 – 5,499	9
2,750 – 3,299	5	5,500 – 6,039	10
3,300 – 3,849	6	6,040 – 6,500	11

From a width of more than 6,501 mm, two separate LED light bars are required.

weinor PergoTex II Control

weinor BiConnect radio technology

Wall gap sealing profile (with LED option)

Installation location for remote receiver, power supply pack and other electrical components

The BiConnect remote receiver ① is installed in the wall connection profile ② and covered by the weinor PergoTex II fabric. However, the remote receiver can still be accessed easily, since the wall connection fabric can be easily removed from the wall bracket for servicing.

Wall connection profile with BiRec MA-K (without LED option)

Power supply pack for LED option

The power supply pack provides the power supply required to operate the LED. It is only required for the LED option.

Position of the power supply pack	Product
in the wall connection profile	weinor PergoTex II LED

Power supply pack installation strip for LED option

The power supply pack ① is positioned in the wall connection profile so that it is easy to access. The transformer/receiver bar is not supplied for the weinor PergoTex II without the LED option.

Cable connection concept for three PergoTex II order options

Whether the VertiTex II vertical sun protection is installed on the guttering or on the sides or whether even connections for additional electricity components are provided: the cabling is integrated into the components in a weather-proof and concealed way and has been prepared optimally in the factory for all options. This ensures a visually appealing and secure installation.

I Preparations for the mains connection for the installation of the VertiTex II vertical sun protection on the guttering (front right/front left)

The power lead 1 for the VertiTex II 6 is routed through the guttering to one of the side channels. For the cable bushing 14, a hole is drilled into the guttering on site and a cable sleeve 7 is inserted. Depending on the order option or the drive side of the VertiTex II, the power lead for the VertiTex II is routed either in the left or in the right, and in exceptional cases also in the centre side channel 5 to the wall gap sealing profile and to the distributor box 9. A VertiTex II lead can be blocked out for each of the outside side channels, it is also possible to block out two leads with a centre side channel. Factory-made mounting preparation:

- Drilled hole and cable sleeve in the guttering 10
- Cable tie 3 (end cap cable fixing)
- Clips with cable sleeve
- 20x20x4 angle bracket with clip (front end cap bolting)
- Wedge seal (fixing the lead in place)
- Distributor box with attachment 9

II Preparations for the mains connection for the installation of the lateral VertiTex II

The VertiTex II 15 lead is routed in the wall-side rectangular profile 8 through a drilled hole and a cable sleeve 7 in the wall gap sealing profile 12 to the distributor box 9. There is not a drilled hole 11 yet for the VertiTex II power supply cable bushing in the rectangular profile. This makes it possible to fasten the locking bar and VertiTex II in a flexible manner without any annoying visible, unused drilled holes.

III Preparations for the mains connection of optional electricity consumers on the guttering

The power supply 2 for optional electric components (e.g. an LED light bar) is supplied on site using the E-Box 4 screwed to the top groove in the guttering. The cable running to one of the side channels is mounted to the guttering 13 on site using clips. The cable has already been routed in the side channel and the end cap front in the factory and leads to the wall bracket.

weinor PergoTex II Planning

* The cross sections and dimensions depend on the pitch

****Delta: dimension 3a minus dimension 3b = difference between installation height and head clearance height**

Site measurements – determining the projection and head clearance height

The pitch of the projection **1** can be up to 25°. In contrast to other pergola awnings, the weinor PergoTex II can also be mounted without a roof pitch (0°) (can then only be used as sun protection). Ideal water drainage without a risk of pooling is provided from an angle of pitch of 8°. The maximum projection is up to 6,500 mm.

The **projection** is the basis for determining the costs for a weinor PergoTex II system. Using the following table (next page), the projection **1** of the weinor PergoTex II is determined on the basis of a given horizontal patio depth **4**.

The projection is calculated on the basis of

- the **angle of pitch 2**,
- The **delta* 3**,
- The **patio depth 4**.

The maximum **head clearance height 3** is 2,400 mm. If this head clearance height of 2,400 mm is exceeded optionally, the stability must be proven on site.

The **dimension 5** is the spacing between the house wall and the side channel (specified with 88 mm in the example above, based on an angle of pitch of 10°). The spacing depends on the angle of pitch.

If necessary, the dimension **5** is used to determine the overall dimensions of the awning (wall bracket to front edge of guttering).

Angle of pitch	Spacing between the house wall and side channel (dimension 5)
8°	86
10°	88
15°	92
20°	97
25°	103

	Patio depth (in mm)								

Table 2: projection depth at an angle of pitch of 8°/10°/15°/20° and 25°.

Example 2: At an angle of pitch of **10°** and a patio depth of **3,000 mm**, the actual projection is **3,161 mm**.

Lateral covers – for each projection

The elegant covers **6** and cover caps **6** cover the mounting technology, protect it against dirt and produce a harmonious side view.

Fabric folding height

The weinor PergoTex II fabric consists of a robust PVC material and is opened with a folding mechanism (folding awning). The fabric folding height ① and the depth of the fabric safety shield ② depend on the length of the projection/patio depth and the number of staves ③. Depending on structural requirements or individual customer requests, the number of staves can be increased to reduced the fabric folding height. The additional transoms may increase the depth of the fabric safety shield ②.

Please note that due to thermal expansion, foreign bodies in transport profiles as well as mounting and manufacturing tolerances can lead to an uneven and sudden extension of the transoms in individual cases.

Fabric end

Angle of pitch from 0° to 18°

For a weinor PergoTex II at an angle of pitch from 0° to 18°, the fabric end ④ is made by welting the fabric in the wall gap sealing profile ⑤.

Fabric end 0° to 18°

Angle of pitch > 18° to 25°

From an angle of pitch > 18° to 25°, the fabric is mounted to the wall gap sealing profile using a 40x10x2 mm angle bracket including screws ⑥ so that it is flush with the house wall.

Fabric end > 18° to 25°

Additional support channel

From a width of more than 4,501 mm, a third support channel ⑦ is required.

weinor PergoTex II with third support channel

Aluminium fabric protection roof

Quiet protection and drainage

The new aluminium fabric safety shield **1** has been designed as a hollow-chamber profile and has a noise-reducing effect when it rains. Rain water runs off the aluminium fabric safety shield **1** sideways to the right and left in a controlled manner **2**.

Controlled rain drainage

When fully extended, the front transom **3** is located directly above the guttering **4**. A transparent plastic lip **5** drains the dripping or rain water directly into the guttering **4** and then into the water drains of the posts.

Lateral cover caps – for improved side protection

Cover caps (standard)

Optional large over caps

Standard cover cap with rain guards (option)

The elegant cover caps **6** cover the mounting technology, protect it against dirt and produce a harmonious side view. The rain guards **7** are available optionally and protect against sideways water ingress.

Use of support profiles

From a safety shield depth of more than 720 mm and from a width of more than 4,000 mm, the use of aluminium support profiles **7** (order option/extra charge) is required. The support profiles are screwed to the safety shield retention profile using clamping sliders. Support profiles make it easier to install long safety shield profiles, since they can be placed on the already pre-assembled support profiles.

Use of reinforcements for higher snow loads

The support profiles are omitted if the 100 x 40 mm safety shield reinforcement profile is used for reinforcement. The reinforcements are mounted in the factory in accordance with the specified snow load as well as width and projection.

Aluminium fabric safety shield profiles and distribution of staves

Projection	Distribution of transoms			Distribution of the safety shield		
	Number of fabric sections	Number of 80 x 60 transoms	Number of 45 x 60 transoms	Number of 190 mm safety shield profiles	Number of 255 mm safety shield profiles	Fabric safety shield depth (values depend on the pitch; the values below refer to a pitch of 10°)
2000 - 2400	3	2	2	2	0	669
2401 - 3045	4	2	3	2	0	669

weinor PergoTex II Posts

Strong versatile all rounders

The stable and attractive posts for the weinor PergoTex II are part of the smart water drainage construction and drain the rain water in a controlled manner.

Integrated water drainage

The pipe 53 ① is invisibly integrated into one of the posts ②. When using post plates (in this figure, the example of large post plates is used), ③ the water drainage can be discharged directly downwards ④ or through a water outlet (on the post corner ⑤ or sideways/to the front ⑥). The height of the water outlet is variable ⑦ and can be easily adjusted on site by means of the two-part post design ⑧ ⑨.

Due to the two-part post design ⑧ and ⑨, the inside of the post can also be accessed easily, for example for cable routing or servicing work on the water drain pipe.

Post installation

Positioning of the posts

The standard position of the “outside posts” is the position in which the side channels and the guttering are aligned flush on the sides.
(not flush in the case of centre/wall posts)

Indentation of posts

Depending on the structural requirements or customer requests, the posts can be indented up to a maximum of 30% of the total awning width. Indenting a post is

only possible on one side. The same applies to the symmetrical or asymmetrical indentation of the posts on both sides along the guttering.

Post installation

Post fixation on concrete floor slabs ①

The standard configuration is the installation of the weinor PergoTex II with post plates on a given concrete floor. The trimmed length of the post must always be specified on the installation sheet.

Bucket foundation ②

Posts are set in concrete on artificial substrates reliably and flexibly at the same time. It is only set in concrete after installation, making the alignment of the posts easier.

Deep-seated foundation ③

The easy and flexible screw attachment on a screw foundation is carried out like the standard fixation (item 1).

Screw foundation ④

They are an alternative to conventional foundations on natural ground. The calculated post length on the installation sheet increases by the spreader bar (X).

Foundation plan

Post installation – post plates

The weinor PergoTex II post plates connect the awning permanently to all substrates and complete the flexible, stabile framework mounting. Post plates are distinguished as follows: "outside post plates" ❶ (for the awning's outside) and "centre/wall post plates" ❷ (post plates for centre or outside posts that are flush next to a wall). Small post plates ❸ (order option) are suitable for small folding awnings or for installation in showrooms.

02

Post plates for "outside posts"

- "Large post plate for outside posts"
 - Water drainage bushing
 - Can be turned by 180°
- "Small post plate for outside posts" (optional)
 - Flush with posts
 - Optimised for small awnings

Post plates for "centre/wall posts"

- Large centre/wall post plate
 - Fixation of centre posts
 - Fixation of an outside post next to a wall
 - Water drainage bushing
 - Can be turned by 90°
- Small post plate for outside posts
 - Optimised for small awnings

Turning of post plates

Post plates oriented to the outside (standard)

Post plates turned to the inside

If the post plates must be flush with the posts on the outside, since this is required, for example, by adjacent objects (e.g. walls or plants), the post plates can be turned by 180° ❹.

Post installation – site measuring

Post position and post distance

Standard: "outside post" ①

Standard with "centre/wall post" option ②; is only supplied on customer request; may be necessary for VertiTex II option

Left and right wall: "centre/wall post" ②

Left wall: left "centre/wall post" ② and right "outside post" ①

Key:
PP - Position of posts
AP - Spacing of posts
- Guttering ③

Post installation – accessory components

Aluminium post reinforcement profile

With the optional 300 mm aluminium post reinforcement profile **2** available for order (picture on the left), the stability of the post fixation is increased.

As a special design, an extra-long aluminium post reinforcement profile (production according to the post length) can also be delivered to stabilise extra-long posts **1** (picture on the right). From a post length of more than 2,400 mm, weinor recommends inserting the aluminium post reinforcement profile or mounting additional posts. If the post height of 2,400 mm is exceeded, the stability must be proven on site.

Cover cap for post plate

The cover caps **3** of the post plates are elegant end elements of the awning so that screws are no longer visible.

The cover caps are put flush over the post plates.

Cover cap for large post plate (outside post); if necessary, it can be turned by 180° together with the post plates

Cover cap for large post plate (centre and wall), illustrated post with water drainage, if necessary, it can be turned by 180° together with the post plates

weinor PergoTex II GE

Glazing elements and combinations

The weinor PergoTex II pergola awning can be supplemented with weinor glazing elements (GE). The table shows the options and possible combinations of weinor sun protection systems and glass elements* with the LITE side element (the triangular trapezoidal area below the side channel).

	Maximum wind load in wind strength on the Beaufort scale (wind speed)	 LITE side element
 VertiTex II with rail guide	5 (approx. 35 km/h) Must be opened with wind strengths over force 5 on the Beaufort scale to reduce the lateral wind load	●
 VertiTex II Zip	6 (approx. 45 km/h) Must be opened with wind strengths over force 6 on the Beaufort scale to reduce the lateral wind load	●
 VertiTex II with rope guide	5 (approx. 35 km/h) Must be opened with wind strengths over force 5 on the Beaufort scale to reduce the lateral wind load	●
 Full glass sliding door w17 easy	6 (approx. 45 km/h) Must be opened with wind strengths over force 6 on the Beaufort scale to reduce the lateral wind load	●
 w50-c fixed element		○ Only with low pergola awning depth or in a position sheltered from the wind
 Lite w50-c fixed element		○ Only with low pergola awning depth or in a position sheltered from the wind

● can be combined ○ on request

* Further information (special permission if necessary) on our flexible all-glass elements can be found in the separate weinor glazing element product brochure.

Flexible fixed glazing elements – w17 easy full glass sliding door

02

Full glass sliding door w17 easy

Alongside an all-round view, weinor w17 easy full glass sliding doors provide reliable protection against wind and driving rain.

- Opens sideways
- Actuator for easy closing
- Guide profiles with several tracks (2 to 5 depending on the design)
- Standing construction
- Transparent gap seals between the lockplate systems' glass
- Pane packages which can be slid open to the left and right up to 6,600 mm (optional as lockplate design up to 10,000 mm; depending on the number of tracks)
- Maximum height of 2,600 mm
- Highly resistant to driving rain and windproof

w17 easy full glass sliding door
with sliding option

w17 easy full glass sliding door
with lockplate option

Note

From a wind strength of 6, the glazing elements must be opened completely and the weinor PergoTex II retracted completely so that there are no surfaces the wind can target. Larger cross sections and dimensions available on request.

Fixed glazing – the w50-c LITE side element

w50-c LITE side element

weinor offers the fixed glazing w50-c LITE ❶ side element to go with the weinor PergoTex II. This side element is suitable for the trapezoidal area up to an angle of 25°.

- Highly transparent
- Two-part retaining section
- No screws in visible areas
- Attractively priced
- Fixed glazing
- Can be combined with the w17 easy full glass sliding door
- Can be combined with VertiTex II rail or rope guide versions
- Can be combined with the w50-c fixed element on request

Dimensioning of the w50-c LITE side element

At a low height of the w50-c LITE side element due to a low angle of pitch of the side channels, the fabric of the weinor PergoTex II can rest on the locking bar of the trapezium during the retracting and extending process as well as in the retracted position ❶. In the long term, signs of abrasion may occur. By ordering additional transoms, the fabric folding height can be reduced and thus the possibility of the fabric resting on the locking bar of the trapezium minimised ❷. Depending on the projection, up to 4 transoms (2 transoms in the case of the LED option) are possible as supplements.

Note

- ❶ The w50-c LITE is only available in combination with the large lateral cover caps.

Large pitch of the side channel

The fabric does not rest on the locking bar of the trapezium.

Low pitch of the side channel

The fabric rests on the locking bar of the trapezium (signs of abrasion on the fabric are possible).

Low pitch of the side channel

With additional transoms (fabric folds), the fabric does not rest on the locking bar of the trapezium in the retracted position, since the fabric folding height is reduced by additional transoms.

Fixed glazing – the w50-c LITE side element

Side element with wind support bracket, steel reinforcement in the locking bar and additional post

The size, surface and weight of the w50-c LITE ① side element result from the pitch of the projection ⑤ and the depth of the weinor

PergoTex II ⑥. Depending on the dimensioning of the side element, the additional use of

- a steel girder* ⑦ in the locking bar ②
- an additional post ③
- or a wind support bracket ④ is required to prevent the locking

bar** from being overloaded or to counteract an increased lateral wind load.

* Optionally integrated steel girder in the locking bar (prepared in the factory)

** w50-c LITE side element rests on the locking bar

Side element w50-c LITE	Installation of an additional post from a side element width		Installation of a wind support bracket from a side element width
	Without an integrated steel girder	With integrated steel girder	With/without an integrated steel girder
Pitch 0° – 15°	> 4000 mm	> 4400 mm	> 3000 mm
Pitch > 15° – 25°	> 3500 mm	> 3800 mm	> 3000 mm

weinor PergoTex II Sun Protection

Vertical sun protection

VertiTex II

The weinor VertiTex II vertical sun protection offers perfect visual and anti-dazzle protection. With its small cassette, the VertiTex II adapts inconspicuously to the weinor PergoTex II design.

weinor recommends the screens by weinor® collection. It includes four different, high-quality fabrics: StarScreen, Soltis® and fibreglass screen. They all offer perfect sun protection and privacy for windows, the patio and balconies. Different degrees of transparency and how much air is let through are possible, depending on requirements.

Note: Soltis® fabrics are not available for VertiTex II Zip.

• Modern round and square design

The VertiTex II cassette and guide rails are available in square and round designs, each in the sizes 75 mm, 92 mm and 112 mm.

VertiTex II details:

- Suitable for large areas (6,000 x 2,400 mm)
- VertiTex II for installation on the guttering for the front side
- VertiTex II on the sides
- Rope guide or guide rails

weinor PergoTex II in combination with the VertiTex II square design

weinor PergoTex II in combination with the VertiTex II round design

Note:

The installation of the VertiTex II on the front side of a weinor PergoTex II is easily possible on the guttering and the posts without further additional elements. Lateral VertiTex II sun protection systems require a wall-mounted rectangular pipe and the horizontal locking bar or the LITE side element. You can find more detailed information in the separate VertiTex II product brochure.

VertiPlus design faceplate for VertiTex II Zip 112

The combination of the weinor PergoTex II pergola awning and the VertiTex II Zip 112 square vertical awning visually create a perfect seamless unit with the elegant VertiPlus faceplate. The system is extremely flexible at the same time, regardless of whether you want the VertiTex II Zip 112 square on the right, left or all the way round. There are 8 different combination options in total.

Positioning of VertiTEx II Zip 112 square on the weinor PergoTex II guttering and posts

weinor PergoTex II Multi-section units

02

Multi-section units

The maximum size of a weinor PergoTex II pergola awning with two posts is 7,000 x 6,500 mm. Wider systems can be extended easily to become a multi-section unit by placing 1-unit systems next to each other. The 1-unit systems installed next to each other have a separate motor drive and can thus be retracted and extended separately. Deliberately dispensing with a continuous fabric facilitates the installation and the units are easy to maintain in the event of servicing or damage.

Example of a multi-section unit with different dimensioning (on the left with additional side channel). The maximum unit width with two side channels is 4,500 mm.

Connecting weinor PergoTex II systems using the cover plate

The side channels of two units are connected and rain water can be prevented from entering between the units using the cover plate ①.

Cover plate ① on two side channels ②

Note: guttering coupling point always without water drainage

Side channels with cover plate (profile view)

Multi-section units with offset

On request, various offset versions can be produced (e.g. wall offset).

Key
 x = lateral spacing 5 mm or 100 mm;
 weinor recommends installing the drive side of the awning with a spacing of 100 mm to the wall.

02

Multi-section unit with offset
 (top view)

Multi-section unit with offset
 (profile view)

Gap covering in the wall offset with lateral wall bracket

The lateral wall bracket **1** covers the gap between the wall and the unit in the wall offset area and protects against penetrating rain water. The lateral wall bracket **1** can be adapted to the structural conditions and cut to the required length. The on-site connections are the responsibility of the weinor partner.

"Large" lateral wall bracket **2**, for unit 2 with drive on the left **M** (lateral spacing of 100 mm)

"Small" wall bracket **3**, for unit 2 with drive on the right **M** (lateral spacing of 5 mm)

Correction of different stave positions in the case of wall offset

Due to the different depth, the transoms have different spacing between each other **4**. The transoms of the 1-unit systems have different positions when they are extracted. An adjustment of the stave positions is possible subject to a surcharge **5**. Please note that the fabric folding height will be different after the transom positions are adjusted **6**.

Fabric folding height at the longer and shorter fold **6**.

Different stave positions in the case of wall offset without adjustment **4**

Stave positions in the case of wall offset with adjustment **5**

Type overview of single-unit and multi-section units

Coupling of octagonal shaft: 1/3 - 2/3 (units are considered separately)

weinor PergoTex II Installation

Installation on the wall using the continuous wall connection profile

The weinor PergoTex II is installed to a wall* using the wall wall connection profile. On the one hand, the wall connection profile is used for the comfortable, visually appealing and stable installation of the weinor PergoTex II.

On the other hand, the wall gap sealing profile is the installation location for the remote receiver, the power supply pack (LED option) and other electric components which are installed there so that they are invisible, but can be still accessed easily for servicing.

Installation of the weinor PergoTex II on the wall using the wall connection profile

Note

The end position of the drive during running-in must be set to ensure that it switches off **incrementally** 2 cm before the arrester. The front end position is switched off automatically on torque.

Fixing the weinor PergoTex II to the wall with the wall connection profile and an angle of pitch of 0° to 18°.

Fixing the weinor PergoTex II to the wall with the wall connection profile and an angle of pitch of >18° to 25°.

* For the installation of the weinor PergoTex II on a ceiling, laterally on a wall or in a niche, the wall connection profile is mounted using angle brackets; see the following chapter: "Angle brackets".

weinor PergoTex II Installation

Angle bracket

Thanks to the weinor angle brackets, the weinor PergoTex II can be installed easily and in a stable and flexible manner for any structural condition.

Installation on a ceiling, laterally on a wall or in a niche

Installation on a ceiling

Installation laterally on a wall or in a niche using the 200 x 100 x 10 x 140 mm angle bracket

weinor PergoTex II 200 x 100 x 10 x 140 mm angle bracket

Installation of the safety shield on the safety shield profile from below

Using the weinor 40 x 40 x 5 x 60 mm angle bracket, it is possible to screw the safety shield to the safety shield profiles from below if there is no space to install it from above (e.g. under a balcony).

Safety shield profile with 40 x 40 x 5 x 60 mm angle bracket/side view

weinor PergoTex II

Rafter mounting

On request, rafter mounting is possible (optional). The wall connection profile **1** is installed on rafters **2** on site using weinor rafter brackets **3** and mounting plates **4**. In the case of the optional rafter mounting, the wall connection profile is supplied without mounting holes pre-drilled **5** in the factory*. Mounting holes in the wall connection profile must be drilled on site according to the rafter spacing.

* No annoying visible mounting holes which are not used The optional rafter mounting must be specified when placing the order to ensure that the wall gap sealing profile is delivered without mounting holes **5**.

weinor PergoTex II Basic

weinor PergoTex II Basic (without posts and guttering)

The weinor PergoTex II Basic is supplied without posts, fabric safety shield and guttering (basic version). It is always the suitable option in particular if the pergola awning is to be placed and installed on existing masonry or on existing posts. Due to its design, it cannot be combined with the VertiTex and the glazing elements, full glass sliding door, LITE side element or fixed glazing.

Projection and pitch

Like the weinor PergoTex II, the weinor PergoTex II Basic can also be aligned with an angle of pitch from 0° to 25°.

The projection **5** of the weinor PergoTex II Basic is the basis for determining the costs. The basis is a given horizontal patio depth **6**, the height of the wall bracket, the angle of pitch or the height of the bottom edge at the front. The projection **5** and dimensions **4** are determined in a similar way to the weinor PergoTex II (please see the weinor PergoTex II Planning section, weinor PergoTex II projection).

Fabric end 0° to 18°

With a weinor PergoTex II at an angle of pitch from 0° to 18°, the fabric end **1** is made by welting the fabric in the wall connection profile **2**.

Fabric end > 18° to 25°

From an angle of pitch > 18° to 25°, the fabric is mounted to the wall connection profile using a 40 x 10 x 2 mm angle bracket including screws **3**.
